

## Cryo Soft X-ray Tomography of Cells

**Eva PEREIRO**

(MISTRAL beamline, Experiments Division, ALBA SYNCHROTRON LIGHT SOURCE, Barcelona, Spain)

**Lundi 2 juillet 2018 – 14h00  
Amphithéâtre SOLEIL**

Cryo soft X-ray tomography can provide relevant structural information of complex cellular phenomena with chemical sensitivity. Functional studies are achieved by correlating this information with visible light fluorescence on the same cell, but also by combining electron microscopy or even X-ray fluorescence. Examples of correlative studies will be presented [1, 2, 3]. In addition, we have explored two ways of improving the spatial resolution and the visibility of the cellular ultrastructure by means of dual axis tomography and multifocal tomography [4]. Examples will also be shown.
